

WHAT IS CLAIMED IS:

1. A grip structure comprising:
 - a surface material layer (10);
 - a substrate material layer (20), said surface material layer (10) and said substrate material layer (20) laminated with each other; and
 - a plurality of evenly distributed bonding combination points (30) secured between said surface material layer (10) and said substrate material layer (20), so that said surface material layer (10) can be bonded and combined with said substrate material layer (20) by said bonding combination points (30).
